

Ingram Micro Security Services

Ingram Micro security services can be customised to meet your business needs. Ingram Micro is committed to work with its partners to protect most important business assets of their customers through our strategic approach to security.

Technical Security Services

IT INFRASTRUCTURE PENETRATION TESTING

Ingram Micro helps its customers identify security vulnerabilities that malicious hackers can potentially exploit. Our pen testers can help you identify security vulnerabilities before malicious hackers do.

APPLICATION PENETRATION TESTING

Our manual penetration testing leverages the OWASP testing guide to ensure that serious security flaws in your application are discovered and secured.

SOCIAL ENGINEERING

The human factor is the most significant risk for the information in your IT environment. Ingram Micro can customise real-life social engineering exercises, including phishing, vishing, and physical security breach designed around your organisation.

Security Advisory Services

SECURITY PROGRAM DEVELOPMENT

Ingram Micro works with its partners to help create, implement, improve, and maintain a risk-focused cybersecurity program that meets your business needs and fits your organisational culture, objectives, and budgets.

THREAT MODELLING

Ingram Micro threat modelling service helps customers prioritise and fix the most critical issues in a systematic and structured way to mitigate potential cyber attacks.

VIRTUAL CISO

Ingram Micro Virtual CISO helps its partners strategise, plan and execute the cybersecurity strategy of their clients to secure information assets while supporting their business operations. A senior dedicated cybersecurity expert will work with the client to build their cybersecurity program.

STRATEGY GUIDANCE

Ingram Micro Security Team advises CIO and CISOs on the steps to take and the areas to invest in to improve their organisation's security posture.

Ingram Micro

Cyber Security Firewall Services

In this dynamic and ever-changing world, it is critical to maintain your security infrastructure, to consistently test, review and update your firewalls, ensuring they can protect your crucial business assets. Ingram Micro's "Firewall Security Services" are designed to enhance your capabilities, allowing you to deliver the outcomes your customers require, securing their networks and maintaining a high level of security across their entire organisation.

Ingram Micro firewall services can be customised to meet your business needs allowing you to white-label our services and re-sell to your customers.

FIREWALL DEPLOYMENT SERVICES

Ingram Micro works with their partners to successfully deploy secure firewalls configured using best practice methodologies and tailored to meet the customers business requirements. We also provide additional configuration services, including but not limited to High Availability, Deep Packet Inspection, SSL Decryption, multi-wan configurations and SD-WAN.

FIREWALL MIGRATION SERVICES

Ingram Micro helps its partners migrate their customers legacy firewalls to the best of breed security infrastructure. Our experienced solution architects assist with building and executing a migration plan that will efficiently migrate your customer's firewalls while mitigating the risk of outages and misconfigurations.

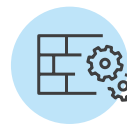

FIREWALL HEALTH CHECK

Ingram Micro can assist partners in conducting Firewall Health Checks. Our security experts will analyse your customers firewalls to ensure they are working at their optimal level, by reviewing device performance, firewall logging, patching levels, custom features and policy review We can also help you create a future state architecture roadmap around perimeter security.

FIREWALL REVIEW SERVICES

Ingram Micro Firewall Review Services are designed to help your clients improve and maintain their perimeter security. Our security experts will assess your customers firewalls to ensure their configurations are still meeting the needs of their businesses and are able to protect against the latest threats and security vulnerabilities.

CUSTOMISED FIREWALL TECHNICAL TRAINING

Firewall requirements, features and security practices are continually evolving to keep pace with the cybersecurity threat landscape. The security of your IT infrastructure requires a team with proper training, skills, and expertise. Ingram Micro can provide expert and customised training tailored for your customer's business needs that will boost knowledge and skillset of the firewall operators.

Reach out to our Cyber team today for more information and learn how our Firewall Services can enhance security of your organisation and customers.
